Applicazioni XML

- Sulla base di XML sono stati sviluppati moltissimi linguaggi, adatti alle varie comunità di utenti e domini di conoscenza
- I linguaggi sono definiti mediante gli opportuni DTD o XMLSchema, solitamente ratificati da qualche ente di standardizzazione
- Alcuni di questi linguaggi trattano esplicitamente lo scambio di dati ed informazioni aziendali
- Vedi: <http://xml.coverpages.org/xmlApplications.html>

Linguaggi XML legati al business

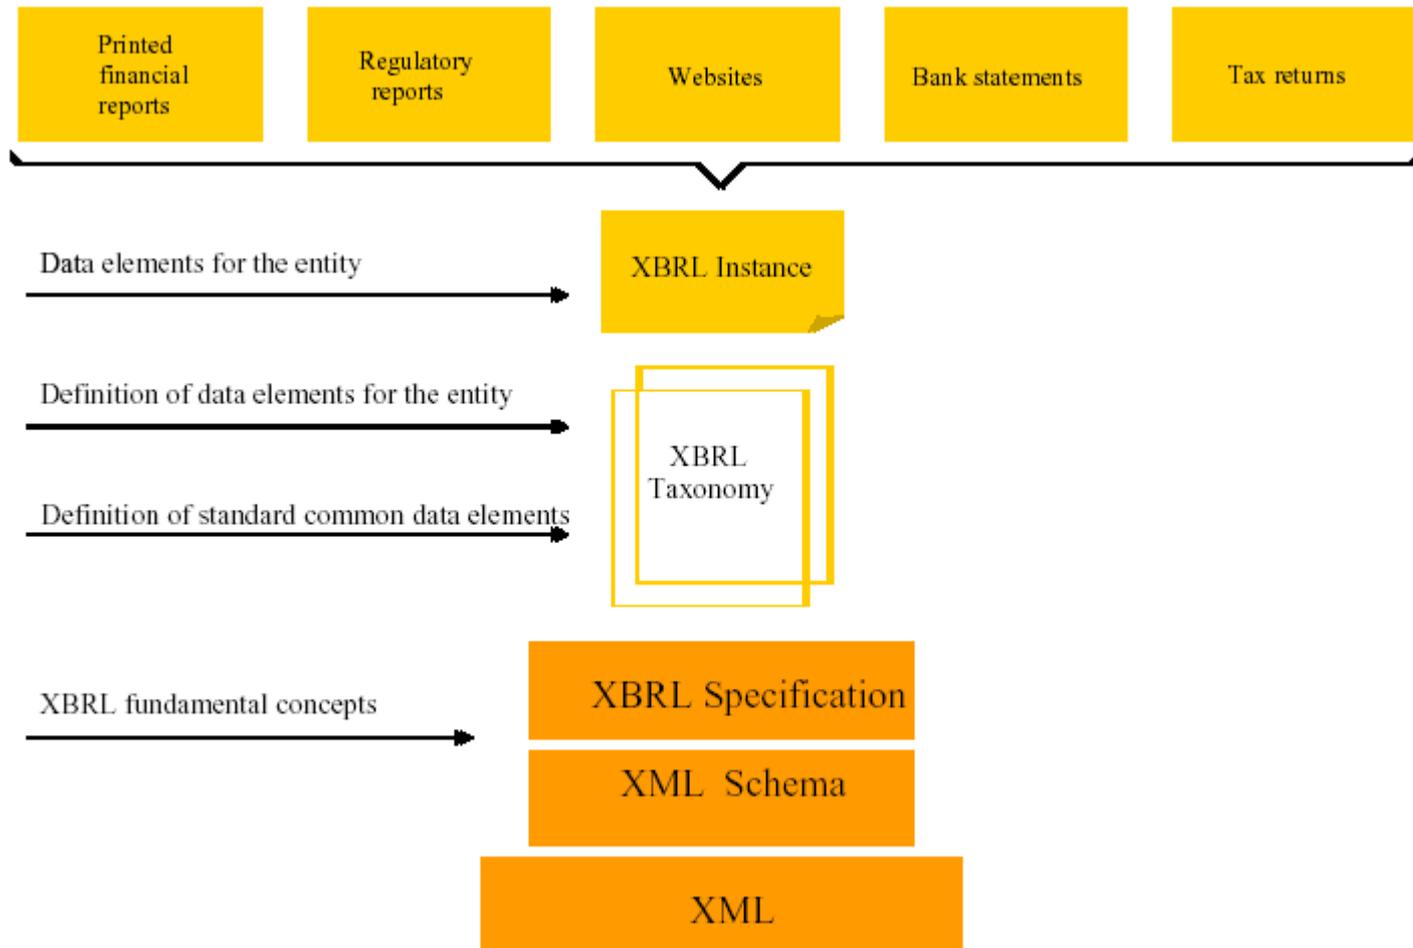

- XBRL – Extensible Business Reporting Language
- ebXML – Electronic Business XML
- fmML – Financial Products Markup Language
- xCBL – XML Common Business Library
- xCML – Commerce XML
- RosettaNet
- UBL – Universal Business Language
- ...molti altri!
 - ...troppi???

XBRL

- Extensible Business Reporting Language
- Creazione ed interscambio di informazioni finanziarie (annual budget, dividendi, ...)
- Nato inizialmente da AICPA (American Institute of Certified Public Accountants) e conforme ai GAAP (General American Accounting Principles) statunitensi
- Sviluppato da un consorzio di più di 400 aziende
- Formalizzazione, in XML, degli standard di reporting già esistenti
- Formalizzazione di diverse *tassonomie* adatte al financial reporting delle singole realtà nazionali/legislative, ed una tassonomia per l'internal reporting

UBL Overview

- UBL, the Universal Business Language, is the product of an international effort to define a royalty-free library of standard electronic XML business documents such as purchase orders and invoices. Developed in an open and accountable OASIS Technical Committee with participation from a variety of industry data standards organizations, UBL is designed to plug directly into existing business, legal, auditing, and records management practices, eliminating the re-keying of data in existing fax- and paper-based supply chains and providing an entry point into electronic commerce for small and medium-sized businesses.
